

Bamboo E-bike

P Kumaresan

Bamboo E-bike is designed to incorporate the structural dynamicity of Bamboo. Primary structure is made of hollow rectangular Mild steel section with seating and othr support structures made out of bamboo strips. A rear wheel hub motor is used along with essential components enclosed in a section of elephant bamboo under the frame.

Ragaaz

P Kumaresan

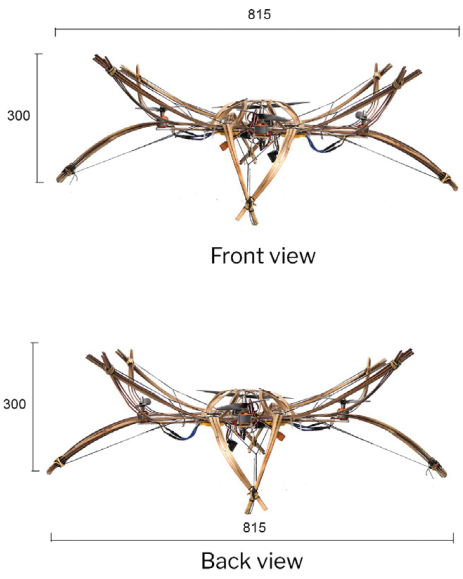

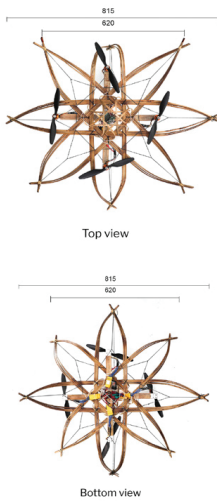

Ragaaz is a bass guitar made entirely out of bamboo and wood. Our focus was to have a simple flow and yet elegant form which is honest yet edgy. The body is made out of bamboo strips using the coiling techniques, which gives it transparency in the design, also making it lightweight. The neck of the guitar is made of hollow bamboo and teak wood

Lotus Bamboo Drone

P Kumaresan

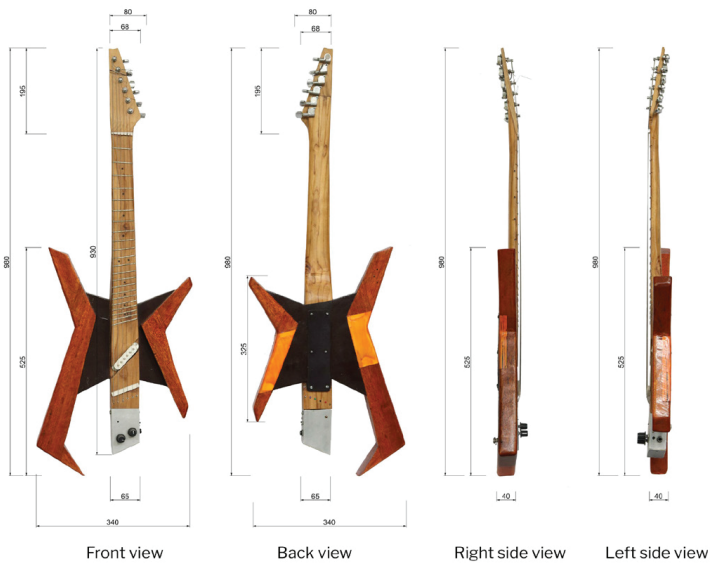

India has a rich heritage with bamboo baskets. These baskets are used every where because of their versatility and cost. Utilizing the qualities of such structures, Lotus Bamboo drone is very flexible and increases the endurance of the drone from falls. Overall weight is also reduced due the lightness of the material.

Comet-W87

P Kumaresan

Comet-W87 is a futuristic guitar design. It houses a 6mm output along with a 3.5mm output jack for 'Silent Jamming Sessions'. The 'FAN Fret' design is backed by an ergonomically designed neck and body to provide the musician with maximum comfort while playing. It is also capable of emitting music via FM channel. The FM muddle comes in varied ranges according to your audience's requirements.
